GRC en Vendor Risk Management (medior) Consultant

Description

The Governance, Risk & Compliance (GRC) possibilities and solutions in ServiceNow allow you to effectively address key GRC issues. Effectively manage your internal risks and controls related to all aspects of GRC and significantly optimize your entire GRC practice.

Automating enterprise risk and control management

Effectively managing a Governance, Risk & Compliance (GRC) program in any organization is one of the major challenges that companies nowadays are facing. Especially now that compliance and control are becoming increasingly important in the current (global) markets and societies.

Due to the fact that GRC is always a company-wide subject that needs to impact most key departments in the organization, the Risk manager is always tackling multidisciplinary highly complex use cases. The major bottleneck in effectively and efficiently managing Risk and compliance is that there are no standardized methods of monitoring risks and corresponding controls. Using 'aged' working methods such as multiple Excel and Word documents in e-mail attachments, both the Risk/Compliance officers as well as the involved business users will easily 'get lost'.

In order to break through these unnecessary impeding barriers, a centralized system should be adopted in which a standardized, workflow driven way of working enables all stakeholders to efficiently and effectively contribute to the GRC organization.
